DATA ENGINEER

DATA PLATFORMS | CLOUD | AI

Architecture-led, hands-on delivery of governed data products and production analytics platforms.

CORE COMPETENCIES

Architecture: Target-state design, data modelling, integration patterns

Delivery: Roadmaps, requirements, quality gates, release readiness

Governance: Lineage, auditability, RBAC, reproducibility

Technical Ownership: Architecture decisions, stakeholder alignment, handover

TECHNICAL COMPETENCIES

Programming
Python, SQL, TypeScript, JavaScript

Data Engineering
Airflow, Kafka, Spark, Hadoop, dbt, dlt, ETL/ELT, streaming, Data Vault 2.0

Platforms & Warehouses
PostgreSQL, BigQuery, Snowflake, Redshift, Databricks, Supabase, Neon, Redis, pgvector

Cloud
AWS, GCP, Azure, S3, Lambda, Step Functions, Vercel, Cloudflare R2

Quality & Governance
Data contracts, lineage, validation, versioning, audit history, tenant isolation, SCD/snapshots

Backend & APIs
FastAPI, REST, SQLAlchemy, Alembic, Pydantic, Prisma, JWT, RBAC, Celery

DevOps & Reliability
Docker, Kubernetes, Terraform, GitHub Actions, CI/CD, Nginx, Linux, monitoring

Analytics & AI
Power BI, Tableau, Grafana, GA4, OpenAI, Claude, Gemini, scikit-learn

DELIVERY METHODS

Agile delivery, discovery workshops, source-to-target mapping, technical specifications, SIT/UAT support, release planning, documentation, runbooks, and production handover

DOMAIN EXPERIENCE

Marketing intelligence, commerce analytics, sustainability/LCA, real-time web analytics, blockchain data, multi-tenant SaaS

EDUCATION

MSc Data Engineering
Aivancity University Paris | 2023-2024

BS Mathematics
Air University | 2016-2020

CERTIFICATIONS

AWS Cloud Practitioner | IBM Data Engineer
Google Data Analytics | Machine Learning - Coursera

LANGUAGES

English - Advanced | French - A2/B1

SELECTED EVIDENCE

1,420 data tests passed | 178 Silver views
81 production API routes | 57 backend tests
60% SQL query-time reduction | 15+ KPI dashboards
5 commerce and marketing source families

Mudasir Shafiq

DATA ENGINEER | CLOUD DATA PLATFORMS | GOVERNANCE & AI

Data Engineer with 4+ years of experience owning architecture and delivery across cloud data platforms, batch and streaming pipelines, analytical models, and AI-enabled products. Hands-on with Python, SQL, Airflow, Kafka, dbt, Spark, PostgreSQL, BigQuery, Redshift, Snowflake, AWS, GCP, and Azure. Builds secure, traceable systems with data-quality controls, lineage, RBAC, automated deployment, and production monitoring.

Architecture & ownership
Target design, modelling, integration and production readiness.

Governance & auditability
Validation, lineage, versioning, controlled access and reproducibility.

Reliable data engineering
Ingestion, orchestration, testing, observability and optimization.

Cross-functional delivery
Requirements translated into maintainable platforms, APIs and reports.

PROFESSIONAL EXPERIENCE

Data and AI Engineer
Jul 2026-Present
Growlytic | Remote

- Own the data architecture for a production marketing-intelligence SaaS spanning competitor research, live ad analytics, AI-assisted creative workflows, reporting, billing, and administration across 81 API routes, 25 models, and 30 migrations.
- Integrated Meta, Google Ads, TikTok and search-data sources with Prisma/Neon PostgreSQL; kept metric calculations, permissions, credits, and report configuration deterministic while Claude and Gemini generated grounded analysis.
- Automated scheduled ingestion, PDF reporting, email delivery, Vercel/Blob operations and idempotent Paddle billing; production builds, live provider workflows, and deployment checks were verified.

Data and AI Engineer / Full Stack Engineer
Jun 2026-Present
GrowMore | Collabs+ and Reporting | Dubai / Remote

- Engineered GrowMore Reporting, a tenant-isolated analytics platform integrating Shopify, Meta Ads, Instagram, Noon, and Klaviyo through Python/dlt, PostgreSQL, and dbt; delivered 178 documented Silver views and 1,420 passing data tests.
- Designed registry-first routing, schema-per-client storage, idempotent Bronze ingestion, reusable Silver macros, explicit grains, relationship tests, and fail-closed controls against cross-tenant data movement.
- Built the Collabs+ modular FastAPI/PostgreSQL backend for identity, profiles, bookings, events, referrals, credits, community and messaging, with JWT/RBAC, immutable ledgers, concurrency controls, Redis/Celery and 57 regression tests.
- Established containerized delivery patterns with Alembic migrations, isolated services, health checks, secure Nginx/TLS architecture, CI/CD conventions, and documented production boundaries.

Data Engineering Consultant
Feb-Jul 2026
Watershed | Contract | Paris / Remote

- Designed normalized models connecting products, bills of materials, manufacturing processes, units, and environmental factors for traceable product-impact calculations.
- Built repeatable ETL workflows that standardized units, validated keys and mappings, and preserved raw-to-normalized lineage across spreadsheet and catalogue data.
- Implemented versioned material-to-process and emission-factor mappings with checks for missing factors, ambiguous candidates, unit mismatches, and reproducible calculations.

Data Engineer
Dec 2023-Jun 2024
Ceres-Advisory | Blockchain and Web3 | Paris

- Architected a real-time GA4-to-BigQuery pipeline through GTM, reducing reporting latency from hours to minutes across 15+ KPI dashboards.
- Optimized multi-million-row blockchain datasets with partitioning and window functions, reducing SQL query time by 60%.
- Designed resilient AWS ingestion with Lambda, Step Functions, and S3, achieving zero post-deployment pipeline failures.
- Developed a DistilBERT sentiment pipeline and surfaced model outputs through Power BI and Grafana monitoring views.

Data Analyst and Performance Marketing
Jan 2022-Sep 2023
PriceOye | E-commerce | Pakistan

- Sustained 6.33x-43x ROAS and delivered PKR 18M monthly GMV through data-driven campaign optimization and audience analysis.
- Raised customer retention from 10% to 15% through AI-assisted segmentation and automated lifecycle campaigns.
- Automated Power BI pipelines and KPI dashboards, eliminating more than 10 hours of manual reporting each week.

SELECTED DATA ENGINEERING PROJECTS

Livestock Intelligence | Kafka · Airflow · BigQuery · scikit-learn
- Built an event/time-series pipeline with Airflow orchestration, validation, CTE-based feature engineering, and LAG windows.
- Prepared model-ready features for health classification, fertility prediction, and milk-yield regression.

Reddit ETL Pipeline | Airflow · Terraform · AWS · dbt · Redshift
- Automated AWS ingestion and infrastructure, then modelled Data Vault 2.0 transformations in dbt and Redshift.
- Published curated analytical datasets through repeatable Tableau dashboards for stakeholder reporting.

Synthetic Data Engine | Python · Validation Rules · Google Sheets
- Generated configurable daily datasets with field-level constraints and business-rule validation.
- Implemented idempotent Google Sheets upserts to prevent duplicates and support repeatable downstream testing.

Karbonomics Impact Engine | Python · SQLite · LCA · Data Quality
- Built a lineage-first product carbon-footprint proof of concept with deterministic ETL, versioned mappings, and generated reporting.
- Verified 17/17 quality checks and 16 automated tests covering reproducibility, units, mappings, and calculated outputs.
